
0.1 Question 2d

If we were to drop businesses with postal code values equal to `missing_postal_code`, what specific types of businesses would we be excluding? In other words, is there a commonality among businesses with missing postal codes?

Hint: You may want to identify and Google the names of the businesses with missing postal codes. Feel free to reuse parts of your code from 2c to re-examine `bus_missing`, but we will not be grading your code.

It appears that the majority of these businesses missing a postal code belong to a collective called “Off The Grid,” which appears to be a group of street food vendors and food trucks that organize food truck markets as well as perform catering. There are also 6 “Approved Locations” / “Approved Private Locations”, but when looking up those businesses individually, they also appear to be food trucks affiliated with Off the Grid. Thus, the majority of the businesses that we would be excluding by filtering out the `missing_postal_code` group would be the food truck / street food vendors of the Off the Grid collective.
